

Supporting the ASPIRE Program

Right Click Solutions is proud to announce that once again we will be hosting an ASPIRE intern from Fox Lane High School. The ASPIRE program is a culminating experience designed to enrich a student's high school career. ASPIRE offers students release time from school to gain knowledge outside of the classroom. The six-week program provides students with a hands-on learning opportunity to gain experience in a career of their choice.

This year Right Click Solutions has created a remote workspace for our ASPIRE intern. We have identified tasks that will be educating as well as challenging to our intern including research, reporting and analysis, which will provide us with data to better serve our clients. We are thrilled to be able to support this important endeavor and look forward to having our intern join us!

Meet Surayyah, a Fox Lane High School senior, who is interested in programming. She will be attending Rochester Institute of Technology in the Fall. Some highlights from her years in high school include: a stellar SAT score, Honor Roll student, proficiency in Python, HTML, CSS and Java, involvement in Girls Who Code, and so much more. During her time with Right Click Solutions, she is expecting to gain a working knowledge of the IT industry, utilize software associated with the industry, assist with reporting and tools used, and gain exposure to working with website updates/modifications and research programs. We are thrilled she has chosen to do her internship with us.
